

Workover Rig: Driver Safety Training

Handling a 50-ton, self-propelled well servicing rig requires special skills and considerations apart from driving the family car. From pre-trip planning to post-trip inspection, this video is designed to instruct an operator in the proper and safe methods of driving a rig. The 19-minute video covers varying weather conditions, as well as the unique characteristics of a rig that require the driver to adjust his attitude and driving habits. Whether experienced or relatively new at driving a rig, this video is an excellent training aid on how to do it right. Specially produced for the AESC. **TV300**
